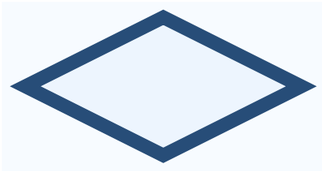
Event Management System ER Diagram

Professional presentation version of the database schema derived from **supabase-schema.sql** and **app-settings-schema.sql**. Primary keys are underlined. Foreign keys are italicized. Relationship diamonds show the business links between entities, while the dashed relationship indicates an application-level connection that is not enforced as a database foreign key.

Notation

Entity

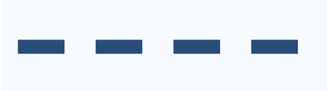


Relationship

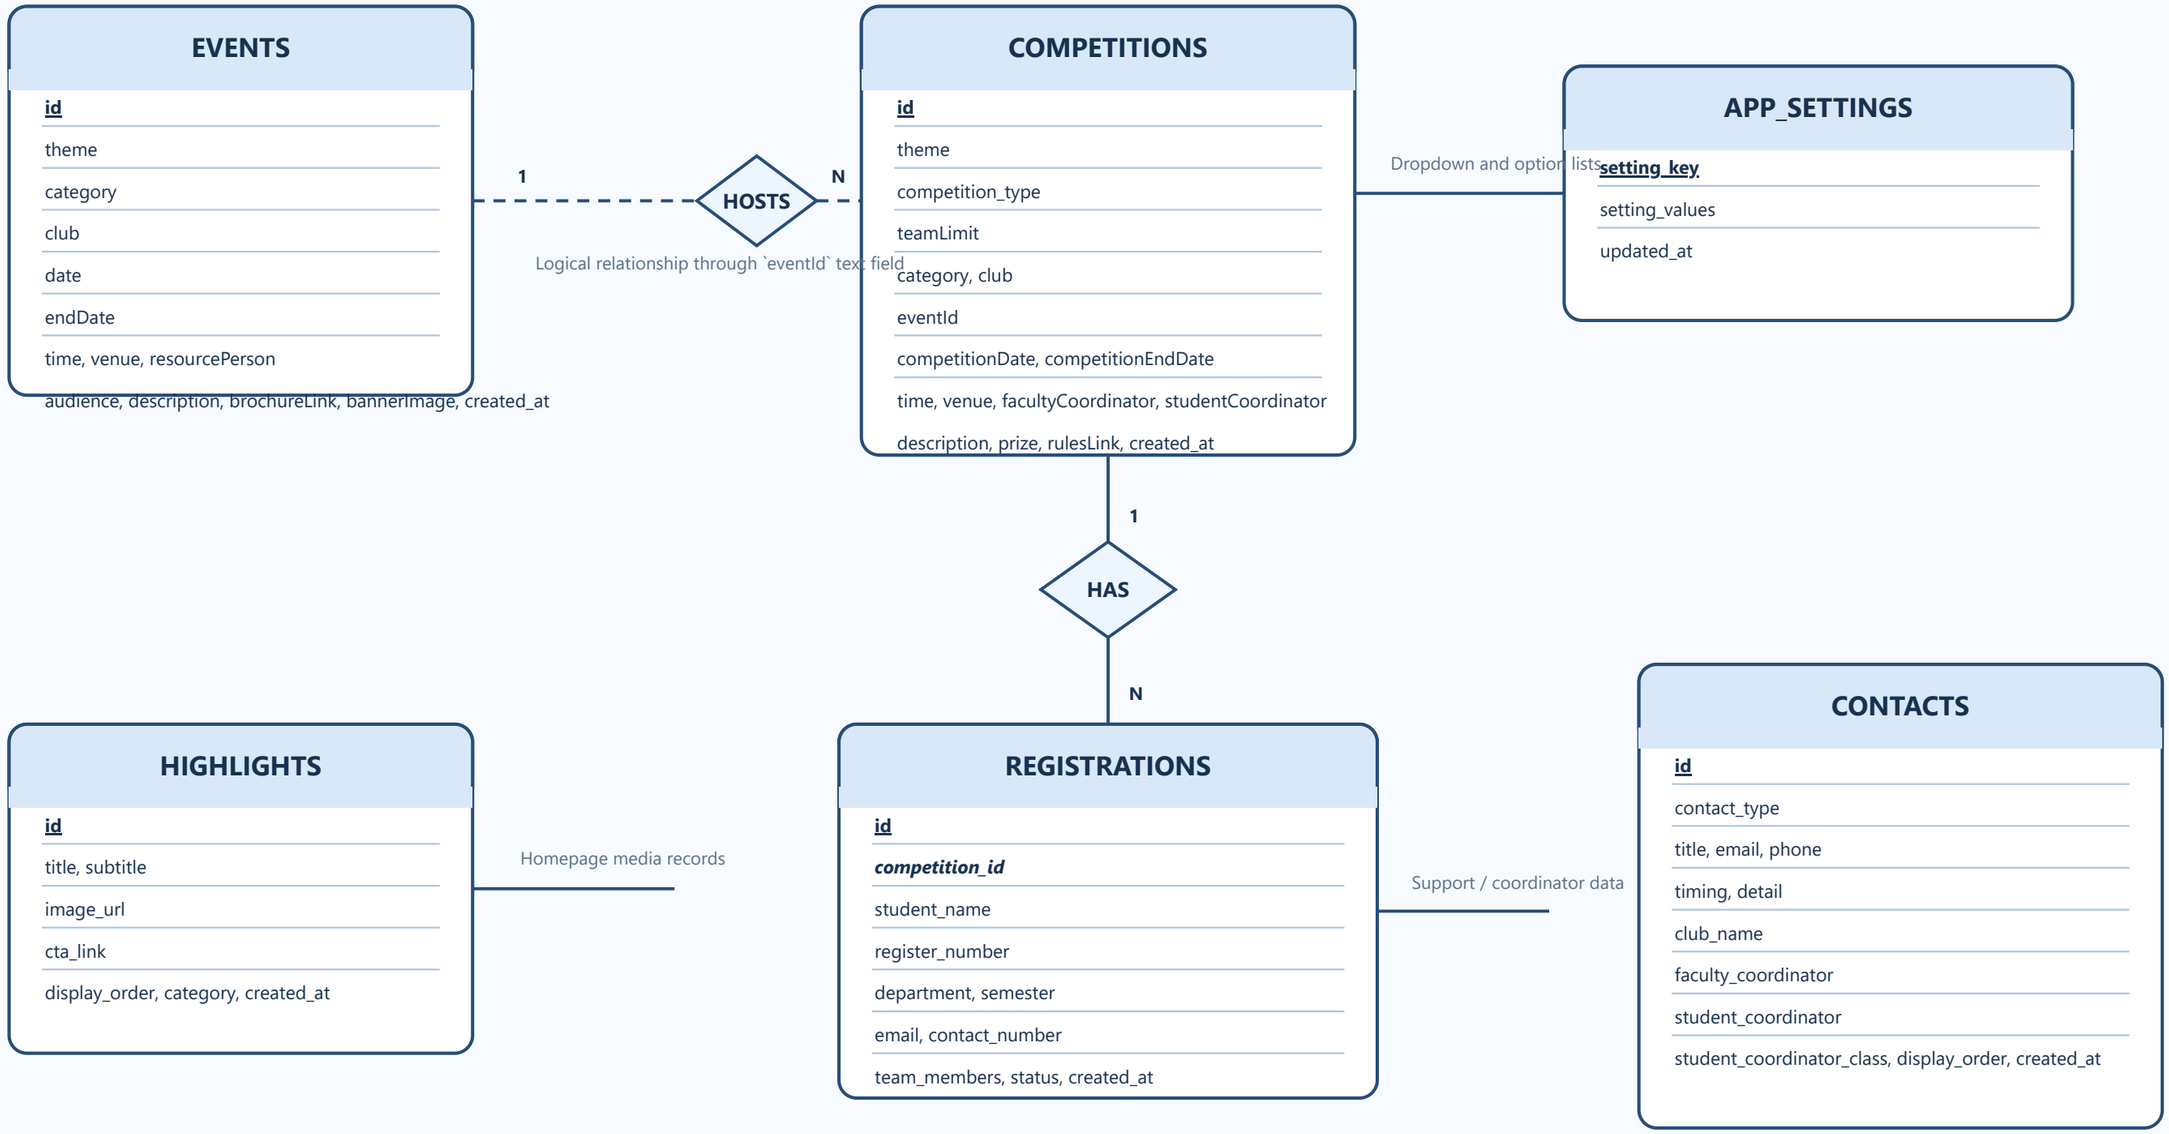
Attribute symbol reference

underlined Primary Key

italic Foreign Key



Logical link only



Relationship summary: The database has one enforced foreign-key relationship: **COMPETITIONS.id -> REGISTRATIONS.competition_id**. The **EVENTS -> COMPETITIONS** link is shown because the application stores an event reference in **competitions.eventId**, but it is not declared as a database foreign key in the current schema.
